

ON AIR. SINCE 1955

Cooker Hood Collection 2015

Choosing the right Cooker Hood

Choosing the right hood for your kitchen is not just about visual appeal...

In order to select the most suitable hood for your kitchen, you need to perform some very simple calculations to establish if the hood can extract sufficient volumes in your kitchen.

Simply measure, in meters, the length, width and height of your kitchen to calculate the volume. The volume calculation is performed as follows:

$$\text{Length (m)} \times \text{Width (m)} \times \text{Height (m)} = \text{Volume (m}^3\text{)}$$

Next multiply the volume by 10. The answer will give you the required capacity for your kitchen. When selecting your hood examine the Max Airflow and if the maximum airflow matches or exceeds your required capacity the hood is suitable for your kitchen.

You should also factor in the noise levels as you do not want to have a hood that matches your required capacity but is very loud. A simple guide for noise levels is if the hood's noise levels are below 55dB(A) it will not disturb your normal kitchen life. All hoods show the noise level range with the loudest noise representing the max airflow.

Please note that all extraction rates and noise levels reported within this brochure are in accordance with IEC standards. The IEC Airflow rate is the 2010 certified testing of Cooker Hoods with 1 meter of ducting and 90° angle bend in accordance with CECEC Code of Conduct. This Code of Conduct establishes clear rules of measurement common to all cooker hood manufacturers IEC/EN 61591. Please ensure that any cooker hoods you make look at comply with the code of conduct to make an accurate comparison.

FABER
ON AIR. SINCE 1955

Subject to technical modifications
and changes to the range without notice

Please note that all extraction rates and noise levels reported are in accordance with IEC standards. The IEC Airflow rate is the 2010 certified testing of Cooker Hoods with 1 meter of ducting and 90° angle bend in accordance with CECEC Code of Conduct. The CECEC Code establishes clear rules of measurement common to all cooker hood manufacturers IEC/EN 61591. Please ensure that any cooker hoods you make look at comply with the code of conduct to make an accurate comparison.

Ducting Kits

In order to achieve the highest extraction rates a ducting kit should be used. Extraction rates will drop and noise levels will change when the hood is used in recycle mode with filters. All hoods in this brochure can be vented or used in a recycle mode.

Ducting Code	Description	RRP
F02DK120	2 mtr. 120 mm Ø Flexible ducting, External Vent White, 2 x fixing clips	€17

Charcoal Filters

Where venting is not possible, use of charcoal filters allows the air to be recycled. Charcoal filters are available to suit whichever cooker hood you choose.

Filter Code	Cooker Hood	RRP
F01CF01	Eos Island, Gemma, Glove, Nice, Ray, Stilo Island, Stilux, Tratto Island, Victory	€30
