

# Boiling Water Taps

# boiling water at your fingertips

Boiling water straight from the tap is the latest trend in the kitchen. Making a cup of tea, sterilising baby bottles, peeling tomatoes or boiling water for pasta will only take a fraction of the usual time. A practical kitchen appliance that will prove its effectiveness every day.

**100° Boiling Water**

Unlike some other “hot” taps in the market the Itho boiling water taps deliver true 100° boiling water. Why is this important?

Because with the Itho boiling water tap you can sterilise a baby’s bottle, brew tea, cook pasta or boil an egg.

**Space Saving Tank**

The Itho boiling tank is designed to fit below the base unit and behind the plinth taking up zero cupboard space.

**Energy Efficient**

The Itho boiler costs just 4c\* per day to run as opposed to a kettle which costs approximately 42c\* every time it is boiled. Save both time and money with the Itho boiling water tap range.

\*subject to electricity rates

## Safety, our highest priority

Safety is paramount in all of our products, and where boiling water is involved it is even more crucial. All of our boiling water taps are equipped with a child safety feature using a recoil spring in the push-turn knob. This prevents unintentional or unguarded use of the boiling water tap, the recoil spring immediately stops the water jet when the button is released. In addition, the design of the outflow keeps the temperature on the outside of the spout at a safe level, the water jet is very compact, in order to reduce splashing to a minimum.

The boiling water taps by Itho have been equipped with various techniques in order to guarantee safety.

### **Tube in tube**

In the outflow of the 3 in 1 tap, the tube in tube technique separates the boiling water completely from hot and cold. This prevents boiling water flowing out when you run the hot or cold water.

### **Push turn knob**

In order to prevent unintentional use of boiling water, our taps are equipped with a push-turn knob. For instant switch off you release the button causing a recoil spring to stop the flow.

### **Compact water flow**

The design of the flow-reducing nozzle ensures a compact, quiet boiling water flow. This limits splashing as much as possible.

## Dolce Chrome

Details	Art. No.	R.R.P
Tap, Filter and 5 ltr tank	ITHO05DC	€1299
Tap, Filter, 5 ltr tank & Blend valve	ITHO05DCBV	€1429

Tap, Filter, 5 ltr tank & Blend valve	ITHO05GSSBV	€1479

## 5 Litre Tank

The Itho boiling water tank keeps the water at 110° and it is dispensed at 100° making it one of the few boiling water taps available. Additionally, the 5 litre tank can be fitted under the unit behind the plinth freeing up space in the cabinet.

---

## Claris Filter

The Itho tap is supplied with a special filter. The Claris filter removes limescale, filters sediment and fluoride and reduces chlorine and odours. The reduction in limescale with this unique filter ensures that the boiler will continue to provide a trouble free performance.

---

## Replacement Filter

Depending on the quality of the water in your area you may require a replacement filter periodically. There are a range of filters available, simply contact us to discuss the options.

# Warranty

Your new Itho 3-in-1 Boiling Water Tap comes with:

- 5 Year Parts Only Warranty on the Heating Tank
- &
- 2 Year Parts Only Warranty on all other components.

*(subject to filter replacement periodically, failure to replace your filter could invalidate your warranty)*
