Choose your sink and tap from the finest European brands...

Ceramic is heat resistant, hygienic and extremely resistant to impact making it an ideal choice of material for a kitchen sink. Made in France, using the finest ceramic materials, with a Chambord Sink you can be assured of a quality product. While Chambord's factory is in the forefront of the new technologies to ensure high-quality products, the final guarantee of optimal quality is that every sink is hand finished by a highly skilled workforce with over three generations of experience working with ceramic.

A leading name in its chosen sector, CM works with many of the world's most prestigious kitchen producers, supplying them with sinks in a wide range of models and finishes. Interpreting Italian style and design standards, CM create high quality stainless steel products, each of which is made with attention to detail. The result is a product which is both reliable and showcases the very best of modern design concepts. All CM sinks are manufactured using European 18/10 stainless steel. Stainless steel has always been used on account of its undisputed durability, functionality and practicality. CM's research has optimised these features and their sinks are constantly increasing in popularity because they are made of the highest quality stainless steel.

SCD Luisina specialises in the design and distribution of equipment for kitchen and bathroom. Founded in 1989, a focus on quality and customer service led to Luisina quickly becoming one of the market leading French suppliers. Luisina are innovators with a focus on design and for Luisina, design is not simply about visuals, it is also about research on new functionalities, on ergonomics and new materials.

S C H O C K ◀

Over the past twenty years, the granite sinks developed and patented by Schock have achieved a highly acclaimed reputation as premium products. Over a million of these sinks are sold each year throughout the world. Schock sinks have been specifically developed to meet the requirements in modern kitchens and withstand everyday use without a trace. The granite used in Schock sinks is combined with high-grade acrylic to produce a hardened composite material that is resistant to cracks and dirt; Schock sinks are extremely durable and easy to clean – red wine, coffee and heavy pans leave absolutely no marks.

Established in 1975 Webert are widely acknowledged as one of Italy's premier quality manufacturers of kitchen taps. The quality of Webert products are recognised internationally and are confidently sold throughout Europe, Asia, Australia and America. Manufacturing under the Webert brand and additionally for many other leading tap brands Webert's long experience stands for top design, performance and style. Webert's in-house R&D laboratory conduct continuous testing on all taps including testing flow rates, pressure shock tests, endurance tests and sensitivity tests. All Webert taps come with a 5 year guarantee which represents the confidence Webert show in their products and gives you the assurance of trouble free performance of whatever tap you may choose.

Stainless Steel Sinks

CM have been manufacturing sinks since 1967 giving them over 40 years experience. Their wide range of sinks is designed and manufactured exclusively in Italy and distributed worldwide.

C.M. is synonymous with innovation, technological evolution, aesthetic flair and prestige, which allow them to respond to and to cater for kitchen designers and manufacturers needs, satisfying every request.

Pure steel: Self-protection against rust and time

This brand, issued by the Italian stainless steel association “Centro Inox”, marks out the AISI 18/10 stainless steel material, whose main feature is that it does not rust if exposed to air and water. Stainless steel has a property that makes it unique: it is self protecting. Thanks to its alloy elements, it forms a thin transparent “passive layer” on its surface. Even if the surface is scratched or otherwise damaged, this very thin passive layer, made up of only a few atoms, instantly reforms due to the effect of the oxygen in the air or water. This explains why stainless steel does not require any coating or other protection to remain shiny and sparkling, even after decades of use.

Stainless steel is a hygienic material. It is an alloy that puts together the mechanical properties of steels with the typical anti-corrosion properties of noble metals. C.M. sinks require little care and minimum time to maintain unchanged their brightness and brilliance. Alcohol or vinegar-based neutral detergents are recommended for cleaning.

After use your sink should be dried with a microfibre cloth in order to prevent the forming of matt areas. In this eventuality will be enough to clean your sink using a cloth with denatured alcohol. Do not leave wet sponges, salt, corrosive substances, hot or ferrous objects on the sinks for long periods of time. Streaks and scratches may be caused by inappropriate use; do not use the sink as a cutting surface.

The soft corners of the bowls and the pleasant design - with curved lines and drainer shaped at several levels - characterise Cristal.
